

Dear FCC -Please reject NAB's petition 04-160. I listen to XM Radio on my commute into Detroit almost every morning. Their weather and traffic reporting is often more timely and accurate than the local broadcasters. I do switch channels on my commute and listen to several local broadcaster for events and local news, but the XM Radio weather and traffic is immediate and accurate. I can't see any advantage to the public in restricting satellite radio from offering these channels.

Sincerely,
George Powell
